

# Architecting the Next Generation DCN for **Flexibility and Scale with Optics and SDN**

Katherine Barabash

*IBM Research – Haifa*

# Cloud Computing:

A style of computing where massively scalable ICT capabilities are delivered as a service over the network

## Separation

- *Infrastructure details are not exposed to customers/partners*
- *Workload details are not exposed to the provider*

## Isolation

- *Workloads are fully isolated from each other*

## Elasticity

- *Resource allocation is automatically adjusted to the dynamically changing workload needs*

## Self-service

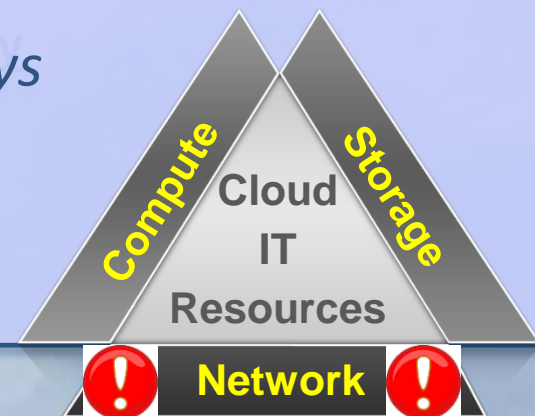

- *Customers can operate their leased cloud portion through UI/API*

## Cloud Computing:

A style of computing where massively scalable ICT capabilities are delivered as a service over the network

### Virtualization

- **Compute** – Virtual Machines, Containers
- **Storage** – Logical Volume, File, Stored Object
- **Network**
  - Traditional – VLANs
  - Emerging – virtualization overlays
    - Host or infrastructure based
    - Software or hardware

## ***Cloud Computing:***

A style of computing where massively scalable ICT capabilities are delivered as a service over the network

### ***Premises:***

1. To deliver Separation, Isolation, Elasticity, and Self-service, ICT resources, namely

Compute, Storage, and Network, must be fully and efficiently virtualized

2. To cope with the growing demand, Data Centre Network must be redesigned for lower latency, higher capacity, hands-off manageability, and greater flexibility

Investigate data plane and control plane technologies for delivering optical advantages to the Data Centre Network

Integrate flexible and controllable COSIGN DCN into the end-to-end cloud orchestration through advanced multi-layer network virtualization

# COSIGN – Next Generation Data Center Network

## Combining Optics and SDN In Next Generation Data Center Network

ENGINEERING FORWARD

# COSIGN – Data Center Network Transformation

**Current  
Generation DCN**

- *Integrated*
- *Feature-rich*
- *Intent-Based*

- *Open*
- *Programmable*
- *Unified*

- *Flatter*
- *More Flexible*
- *Higher in Capacity*
- *Lower in Latency, Power and Cost*

**Next Generation  
DCN**

# COSIGN – Data Plane Transformation

## Current Generation DCN

core

- **Hierarchical**
- **Rigid**
- **Over provisioned**
- **Segregated**
- **Inefficient for east-west flows**
- **Restricts workload placement**

Data Plane  
Topology

## Next Generation DCN

- **Flat**
- **Reconfigurable**
- **Non-blocking**
- **Converged**
- **Accommodates all flows**
- **Accommodates all placement**

Optical Circuit  
Switch

# COSIGN – Data Plane Transformation

## Current Generation DCN

- Many types of interconnects
- Many types of cables
- Occupy lots of space
- Hard to manage

Data Plane  
Cabling

## Next Generation DCN

core

Optical Circuit  
Switch

- Converged interconnect
- All optical cabling
- Allows for more density
- More manageable

# COSIGN – Control Plane Transformation

## Current Generation DCN

Control Plane

## Next Generation DCN

- **Closed**
- **Static**
- **Heterogeneous**
- **No global visibility**
- **Slow (HW) innovation cycles**

- **Open**
- **Programmable**
- **Unified**
- **Logically Centralized**
- **Fast (SW) innovation cycles**

# COSIGN – Management Plane Transformation

## Current Generation DCN

Management Plane

## Next Generation DCN

- Manual configuration steps
- Slow
- Error prone
- Based on overprovisioning

Infrastructure  
Reconfigured

- Automated
- Streamlined
- Optimized
- Allows for right-sizing

# DCN for Virtualized Environments

- Same functional requirements but on a far larger scale
  - Large (up to 100K) of physical servers per data center
  - \*10 for the Virtual Machines
  - \*100 for containers
- More dynamic lifecycle
- Less tolerance for delays and for manual steps

# DOVE – Distributed Overlay Virtual Network

## Network-as-a-Service abstraction

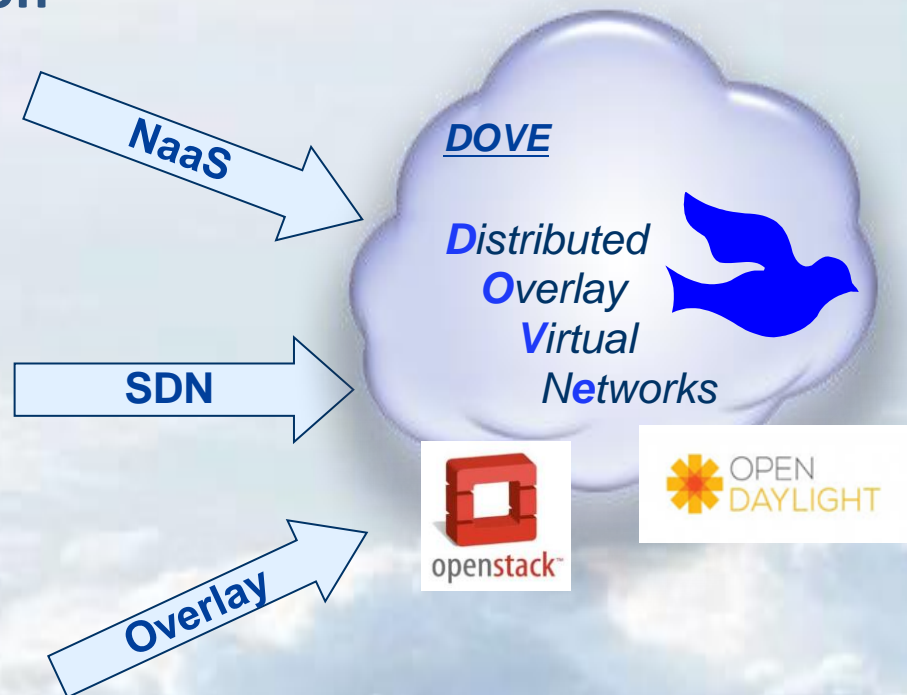

- *Connectivity under policy*

## Centralized control plane (SDN)

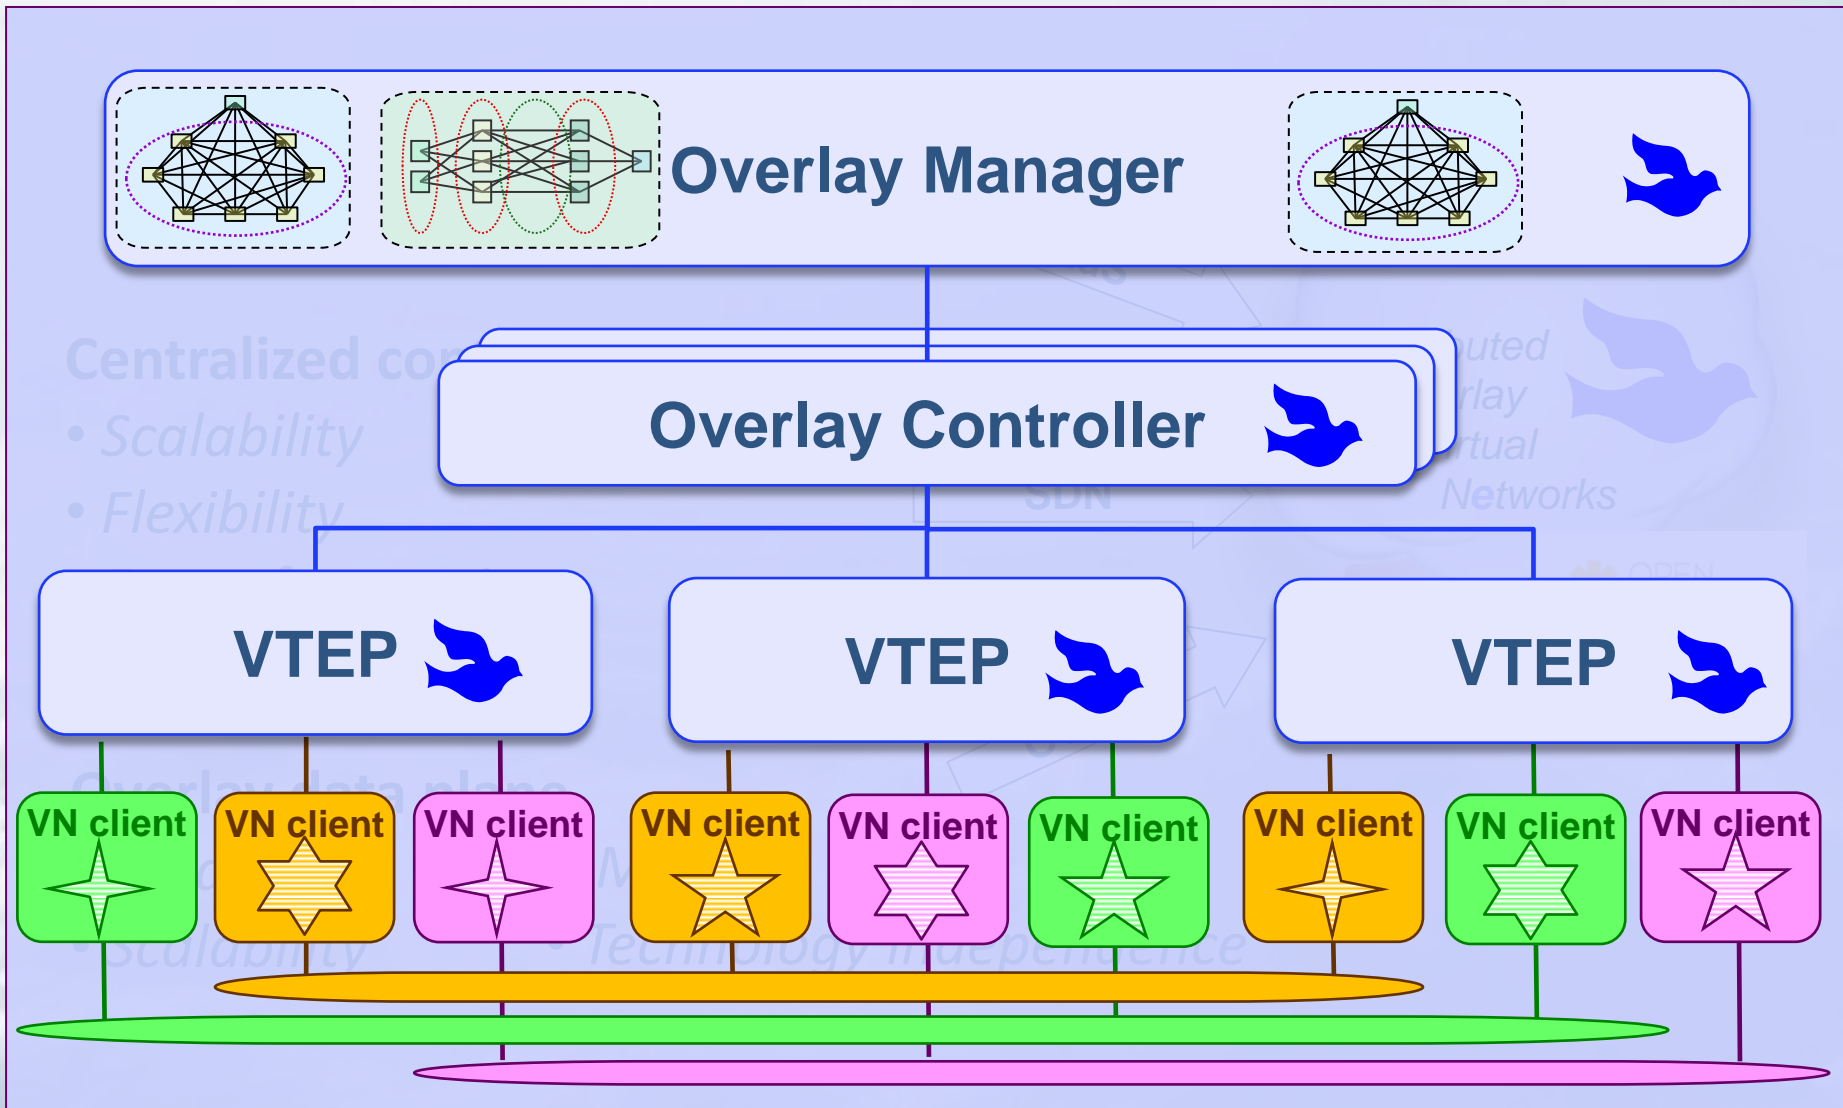

- *Scalability*
- *Flexibility*
- *Ease of operations*

## Overlay data plane

- *Isolation*
- *Scalability*
- *Mobility*
- *Technology independence*

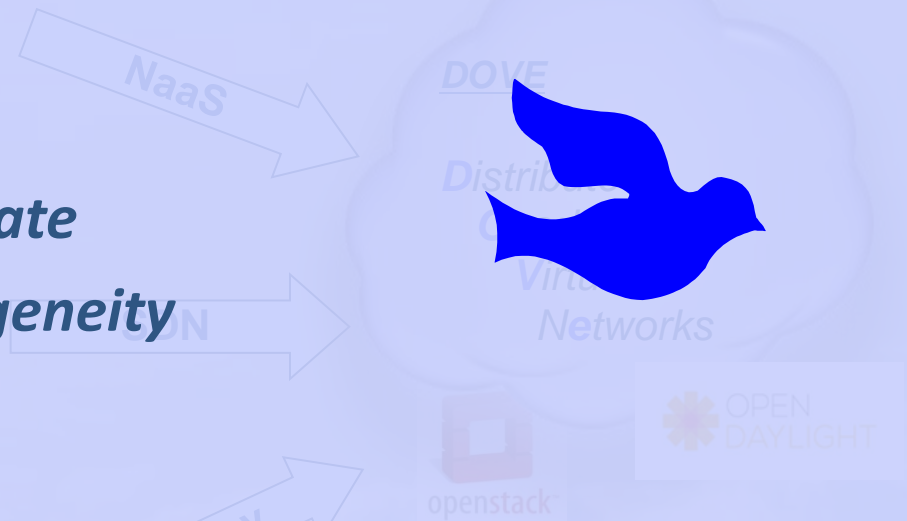

# DOVE – Distributed Overlay Virtual Network

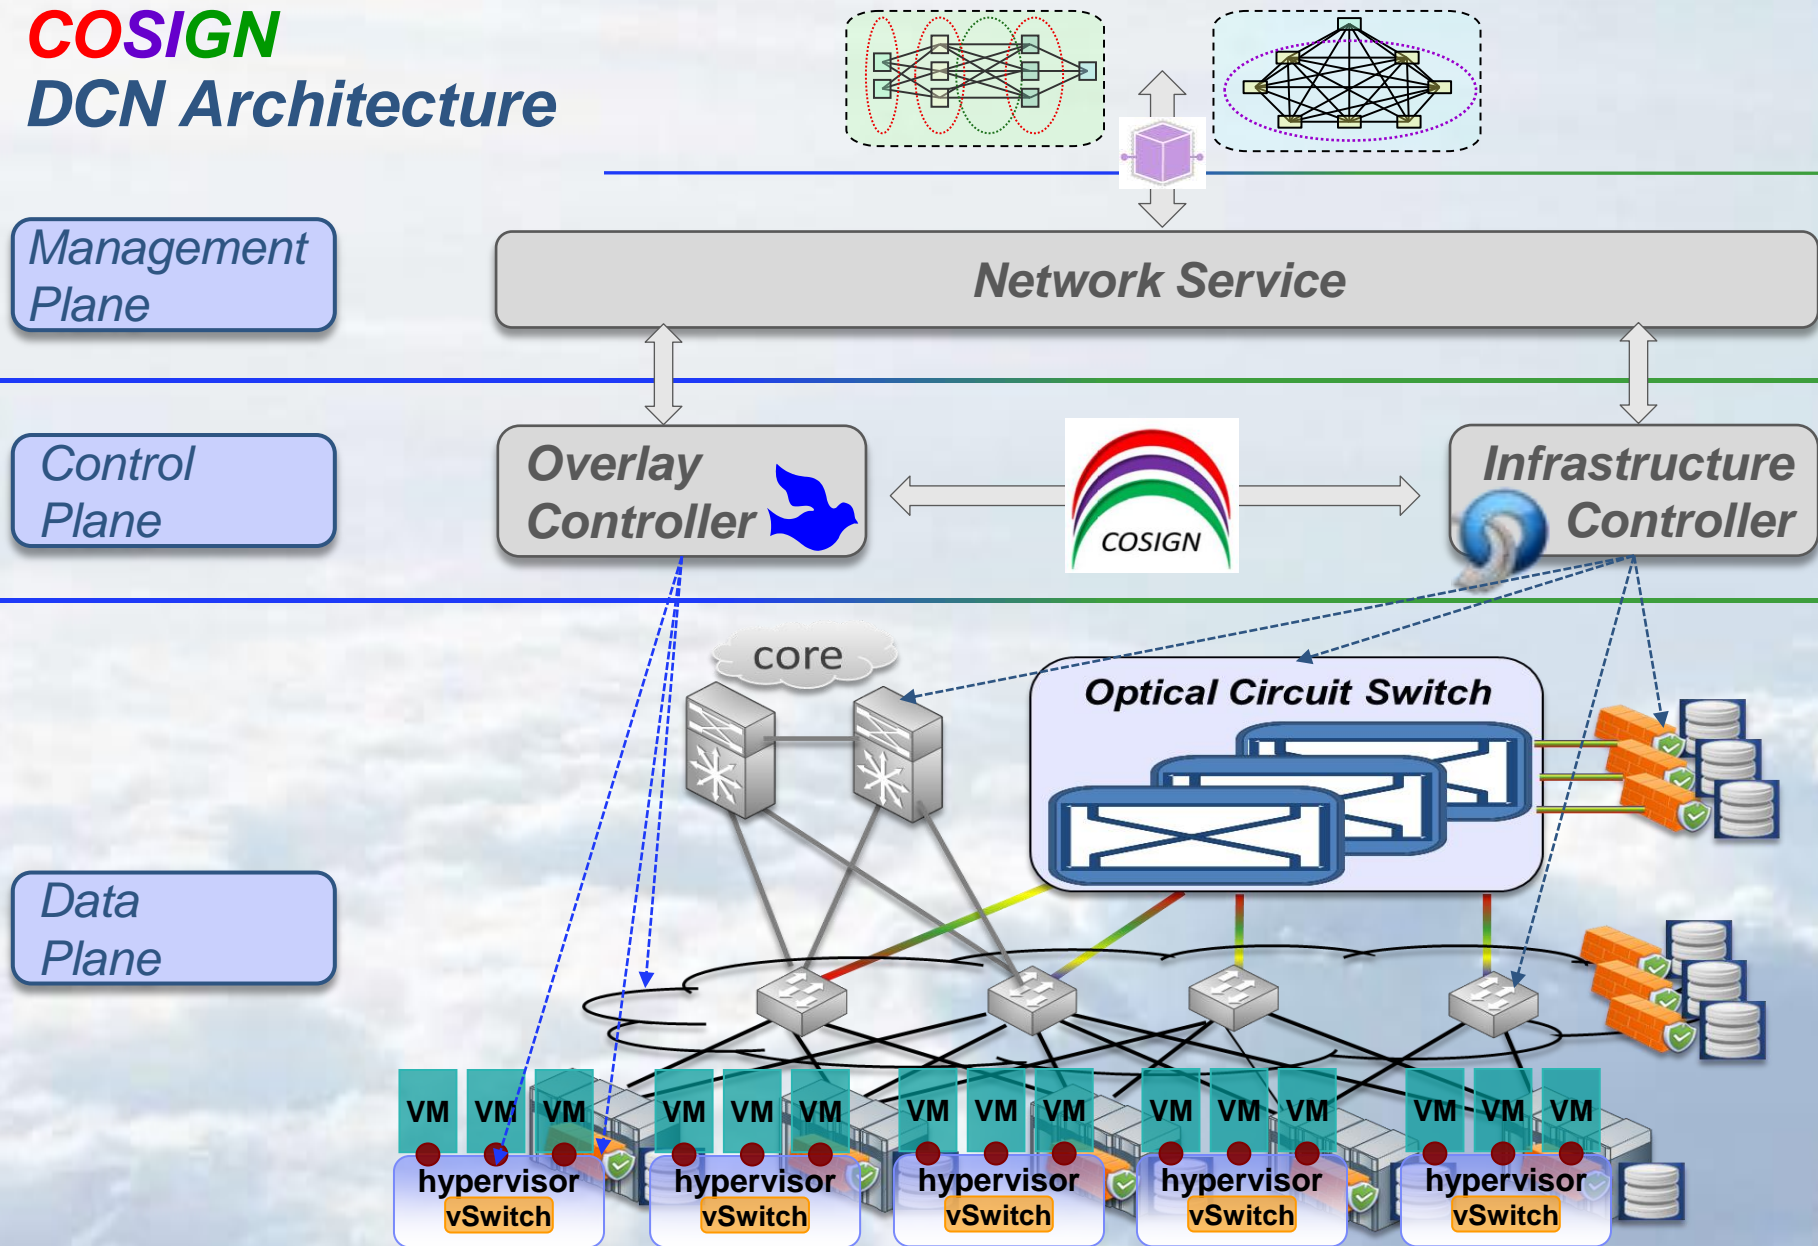

# DOVE – Distributed Overlay Virtual Network

*Complete isolation from the physical network is a mixed blessing*

- **Pros**
  - *Can use own addresses*
  - *VN clients can easily migrate*
  - *VTEPs enclose the heterogeneity*
- **Cons**
  - *Can not differentiate between the physical paths*
  - *Can not interoperate with the physical devices*
  - *Can not reliably monitor and troubleshoot*
